

s_con – Sophisticated Synthesis of Design and Material

Bad Münden, October 2006.

s_con – this label stands for a sophisticated range of chairs that is characterised by its unusual mixture of materials. The designer team of Lepper, Schmidt, Sommerlade has succeeded in expressing a clear form language, thanks to their skilful use of dynamic line statements.

The established general design has been retained and adapted in line with the latest ergonomic standards and findings. The products stand for a high level of seat comfort as well as increased additional opportunities in the high-class market segment. The appearance may change but the transparency and slimline silhouette remain present at all times. As with all Haworth products, the application of high quality engineering and painstaking manufacturing ensures a corresponding level of quality and comfort.

s_con is available both in swivel and cantilever form. Each model can be supplied in black or silver metallic, as well as polished aluminium or high-gloss chrome, depending on the customer's requirements,
